

LADIES AND GENTLEMEN:

I am very concerned that in your haste to accomodate BPL commercial interests, that you have not/ are not, addressing the many concerns of interference with licenced services. These concerns have been adequately expressed by many but are not addressed in any meaningful way. Specifically interference from part 15 level energy to and from Amatuer radio operations. All evidence Ive seen says it will be extemely harmful. Ive seen nothing from FCC that says otherwise! Without technical evidence to support the viability of BPL from a non interference point of view, I urge you to cancel this proposal until such time as evidence of compatibility with existing licensed services exists and is made public.

Sincerly

Dean Showalter W5PJR
